

Legislation -

Local, state, and federal legislation greatly affect the type and uses of technology in our schools. Legislation creates accountability standards for our schools. Many of these standards have technology components, such as No Child Left Behind act.

We can use technology to do great things. By taking advantage of technology, we can meet our educational goals. Furthermore, members of the legislator want students to become proficient in using technology, therefore they have set benchmarks, such as the NC Computer Skills Test, which all students must pass before graduating in NC public schools.
