Summary of research:

The material that most contaminates our beaches, rivers, lakes are the plastic things because this is most use it in many of the products that we use everyday.

How do humans affect the environment?

The human is the principal causes of destruction of the environment because we consumers an excess his resources (generates) to satisfy our necessities. For example: to create a table we need wood so we destroy a tree to take his wood for create the table, that's generate the destruction of many rainforests.

Who is responsible? People or government and why?

The most responsible of the pollution of the world is the people because the persons create the pollution and contaminate our planet. But also the government of all countries specially the rich countries because they are the countries that most contamination generates. So, the government also have responsibilities in this topic because the don't have enough laws to protect and (conserve) the environment.

How can I make others in my community aware of the importance of clean lakes, rivers and beaches?

I can make posters, webpages, speech books, etc. about the environment preservation and conservation because all of them can influence the minds of the people to be a green person. Also, we can create objects like woman's purses, wallets, floops with recycled materials.

What do you think will happen if we don't protect and conserve our water resources?

If we don't protect our water resources, it will be the end of our planet because without water we and all living things like animals, trees, plants will die. Only the 1% percent of all water of the world is for drink because these is fresh water. But if we still pollutions all the rivers, lakes and beaches, we we generates our destruction.

In what way can you as an individual stop or help stop this ecological disaster from happening?

There are many options that someone can help to stop this ecological disaster alone like:

- Create a web pages about the ecological disaster and climate change to influences to the persons about the consequences of not protect the planet or gives green tips to protect our home (the Earth)
- Create posters about ecological tips to protect the environment, like take off the light when we don't use it, etc.
- Create objects like woman purses, floops, wallets and other things to dress with recycled materials that use the...
